

After breakfast we should go for a ride in a calèche around the magnificent ramparts, quite the best introduction to the Pink City,

on to the **Majorelle Garden and Museum of Islamic Art** of the recently-deceased fashion icon Yves Saint Laurent. Today, beautiful shaded grounds, an impressive collection of exotic plants and trees and an Islamic Art Museum (*Musée d'Art Islamique*) make this garden one of the must-see attractions in Marrakech. The gardens were once the home and haven of French painter Jacques Majorelle, born in 1886 to a renowned cabinet maker in Nancy, France. Travels to Spain, Egypt and the Mediterranean all pulled him away from his native country, but it was Morocco that beckoned Majorelle most strongly. In 1924 Majorelle settled in Marrakech on a property that would become known as Majorelle Garden where he created a retreat with a stunning home, spacious work studio, and vast garden in which he could indulge his botanical interest by growing plants and trees from around the world. Majorelle's passion for Morocco – especially the south – became evident in his paintings. Later travels to Sudan, Guinea, Niger, Senegal and the Ivory Coast were also to influence his work. Although Majorelle opened his property to visitors in 1947, the garden began to deteriorate following his death in 1962. Restoration of the Majorelle Garden began after Yves Saint Laurent and his partner Pierre Bergé purchased Majorelle's former home in 1980. The house itself is not open to the public. Partially hidden by the foliage of trees, its majestic architecture can be seen from certain vantage points in the garden. Further improvements were made in 2000, including an irrigation system which reduced water costs by 40 percent. Today, the grounds of the Garden are beautifully maintained and create an atmosphere of lush tranquillity. Winding walkways, quaint bridges, gurgling fountains, and shady gazebos add to the landscape. Home to hundreds of exotic plant and tree specimens brought from five continents, these include cactuses, bamboos, palms, blooming potted plants, and aquatic plants. Bird lovers will appreciate seeing the many species of local birds which inhabit the garden amongst which you may spot Pied Wagtails, Kestrels, Storks, Collared Flycatchers and more. The green roofed building that gets most of the attention, however, is the bright cobalt blue

(referred to as *bleu Majorelle*) and yellow building that Majorelle used as a studio workshop from 1931 now houses the Museum of Islamic Art. The same cobalt blue is used with bright yellow to add colour and contrast throughout the garden. This small museum houses a tasteful collection of Islamic art, good examples of Moroccan tribal art - some hundreds of years old - textiles, weapons, carpets from all over North Africa, jewellery, furniture. Some of Jacques Majorelle's art work and engravings of local scenes in Morocco is also on display. There are also exhibitions of marriage curtains and fabrics, embroideries, manuscripts and many other masterpieces. On now down into the Medina via the dramatic Almohad **Koutoubia Mosque** (entrance to the Mosque is prohibited to non-Muslims), one of the major architectural triumphs of the Almohades, the 12th century dynasty responsible for one of the worst periods of Jewish persecution. The Koutoubia Mosque is the tallest mosque in Marrakech, its construction decided in 1158 by the Almohad Sultan Abdel Moumen soon after his conquest of Marrakech, occupying the square of a former Almohavid palace whose mosque was destroyed, supposedly as it did not face Mecca. Completed in 1199 with the construction of its famous minaret ordered by the Sultan's grandson, the Caliph Yacoub el-Mansour who died the same year, this minaret (from the Arabic word *menara* or lighthouse) was later used as model for Giralda of Seville then for the Hassan Tower of Rabat. The main function of the minaret was to provide a vantage point from which the muezzin can call out the *adhan*, calling the faithful to prayer. In most Mosques these days, the *adhan* is called not from the minaret, but in the *musallah*, or Prayer Hall, via a microphone and speaker system, the role of the minaret is now largely for traditional and decorative purposes. A jewel of Hispano-Moresque art made up of 16 outlying naves and one larger central nave, its name is derived from the Arabic *al-Koutoubiyyin* for "bookseller", or "librarian", since it used to be surrounded by the stalls of sellers of manuscripts and books and by scribes. This square tower in finely-worked dressed stone is 77

metres tall, (as high as the Notre Dame Cathedral in Paris) including its lantern. Considered to be the *ne plus ultra* structure of its kind, decorated with ceramic tiles forming different patterns on each side, it boasts of six rooms, one above the other, with a ramp leading up around them by way of which the muezzin could ride his horse (or mule) up to the balcony. It is built in a traditional Almohad style and the tower is adorned with four copper globes. According to legend, they were originally made of pure gold, and there were once supposed to have been only three. The fourth was donated by the wife of Yacoub el-Mansour. As compensation for her failure to keep the fast for one day during the month of Ramadan she had her golden jewellery melted down to fashion the fourth globe. We continue into the **Djmaâ el Fnaâ Square** (the 'Assembly of the Dead'), where, until the 19<sup>th</sup> century, were traditionally displayed on stakes the severed heads of criminals. We take lunch at the Al Baraka Restaurant overlooking the Square to see from above stalls of goods, from fruit to alarm clocks; snake charmers and water sellers; fortune tellers and public scribes; tumblers and *nakkachat* - women with syringes full of henna - soothsayers and *gnaoua* musicians. With the touch of a journey back into time we set off into the bustling Kasbah to the lavishly-decorated **Saâdien Tombs** - discovered in 1917 with some tombs dating from the middle 1550s; this is the ancient cemetery of the *shorfa*, the descendants of the Prophet Mohammed. Here you see the Prayer Hall with its horseshoe arches, the tombs of the Alaouite princes from the 18<sup>th</sup> century and a large tomb of the Black Sultan, the Merinid Dynasty Abou Hassan. On into the Hall of Twelve Columns, the central mausoleum of Ahmed el Mansour, who died in 1603, with its colonnade of twelve decorated marble pillars and intensely carved upper stuccowork that looks like gilded lace. To his right is his son and successor Zaidan; to his left his grandson Mohammed ech-Cheik. There are 33 other tombs of Saâdien princelings. From here to the **El Badi Palace**. The remnants of a magnificent palace built by the Saâdien Sultan Ahmed Ibn Moussa al-Mansour in 1578? designed by Mohammed el-Heqqs under the influence of the Alhambra in Granada, which took some 16 years to complete, was named 'Badi' (the Incomparable), one of the 99 names of Allah (moreover, *ksar l-bdi* in Moroccan Arabic means 'the porcelain palace', which could refer to the rich ceramic panels that profusely decorated the building). Montaigne, in his *Voyage en Italie*, reported that Italian craftsmen near Pisa were cutting

'for the King of Fes in Barbary', 50 very tall Italian marble columns which were paid for in sugar, weight for weight. Workmen from different countries, including in Europe, were recruited to execute the work. For three-quarters of a century, the Badi was the venue for all of the great ceremonies and parties given by the Saâdien Sultans and ended up with a reputation, more or less deserved, for excess and debauchery. This was the main reason why the Alaouite Sultan Moulay Ismail (1672-1727) ordered the complete destruction of the once fairy tale building and used the materials to decorate his own palace in Meknes. Consequently all that remains today is a section of the 2 metre-thick outer wall, the esplanade, with remains of its pools and orchards, one of the pavilions with its columns and some decorative elements (stucco, marble, zellige - small tiles). However, excavations carried out in the 20<sup>th</sup> century, the discovery of two drawings of the palace (one Portuguese and one English) and the reports of contemporary chroniclers and foreign visitors give us a reasonably precise idea of how the Badi would have been in its heyday. The palace, thought to have consisted of 360 rooms, was symmetrically planned around an enormous rectangular courtyard measuring 135 m by 110 m, including a long central pool measuring 90 m by 20 m that contained a monumental fountain and had hollows on either side planted with trees and flowers and four small rectangular basins at the ends whose ceramic mosaic paving is still visible. The east side of the palace looked out over a large garden known as 'the Crystal Garden'. Two pavilions measuring 15m by 16m were built halfway along the shorter sides of the courtyard and two more measuring 23m by 15m in the middle of the longer sides. Truncated-pyramid towers stood in the corners of the courtyard. The pavilions were crowned with domes whose ceilings were encrusted with gold from Sudan and precious *muqarnas* (honeycomb work) supported by marble columns with capitals covered with golden leaves. The floors and walls were covered with faience mosaics, the doors were made of sculpted cedar wood and,

throughout, the fountains gushed water from the mouths of lions, leopards and pythons sculpted in solid silver. It also has a small, underground, tunnel-like jail with about four cells where the king kept his prisoners. On, now to the nearby late 19<sup>th</sup> century **Bahia Palace** (its name translates as 'The Brilliant') built by craftsmen from Fes for the black slave Si' Ahmed Ben Musa (or Bou Ahmed) after he had risen to power and wealth as the Grand Vizier of Sultan Moulay al-Hassan. The attractive, well preserved, Harem Courtyard has featured in many Big Budget Movies. It took nearly 15 years to complete; the rooms (nearly 150!), housed Bou Ahmed, his 4 wives and 24 concubines plus servants and guards. The Palace follows the patterns of typical Islamic architecture, with central courtyards, having rooms leading off them, with doorways that are placed so that you can't see beyond (providing privacy). Fountains and 2 acres of gardens are also typical features, along with the decorative stucco panels, tiled floors and zellige work. From here we continue up to the **Dar Si Said Museum**. Formally a palace originally built by Mehdi Mnebbi (1894-1908), Moroccan ambassador to London, it was then bought by T'hami el Glaoui, the famous Pasha of Marrakech and 'Lord of the Atlas' during the French Protectorate. Restored in 1997, it houses both traditional and contemporary exhibitions of Moroccan arts and sculpture - the very quintessence of Moroccan art. The building is the work of Si Said, a half-

brother of grand vizier Bou Ahmed who expanded the Bahia Palace. In fact, Dar Si Said is a smaller version of that Palace, with finer and more impressive decoration. On the ground floor you can find clothes, objects in beaten copper, beautifully decorated weapons, skilfully crafted traditional silver Berber jewellery from the southern Anti Atlas region, oil lamps and carvings in the special Tarouddant soft stone. Splendours from the past? Not at all, for many of the objects on display are still used and worn in mountain areas. Fountains sculpted from pink marble decorate the tiled courtyards that are accented by the turquoise, greens and whites of the mosaic designs. The most important exhibit in the Museum is a marble basin dating back to the 10<sup>th</sup> century, brought to Marrakech from Cordoba by the Almohad Sultan Ali Ben Youssef. The first floor salon impresses with its Hispano Moorish decoration and elegant furniture in cedar wood. It is such an accurate reproduction that, at any moment you half expect to see a bride in her ceremonial dress return to the armchair and show herself off to all the admiring guests. Other rooms are filled with an abundance of intricate chests, ancient pottery from Safi and Tamegroute, worked leather from Marrakech as well as a remarkable collection of Berber carpets from the High Atlas and others that originate from every corner of the globe; some have made use of

leather while others make use of textiles to create items that accurately reflect the regions from which they originate. Stop a moment to examine coming from the Sahara region, characterised by the use of embroidered leather, and large, pile mats evoking the dry beauty of the semi-desert. A remarkably impressive eighteenth and nineteenth-century collection of door and window frames is to be found around the courtyard, all encrusted with the most delicate and refined ornamentation. We continue up into the Medina and the 14<sup>th</sup> century **Ali Ben Youssef Medersa** - one of the most beautiful buildings in Marrakech that housed the Islamic equivalent of a monastery; the tranquillity within contrasts with the chaotic pace of life outside in the Medina. Founded by the Merinid Sultan Abou el Hassan in the

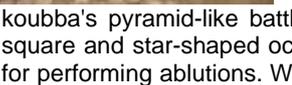

14<sup>th</sup> century, it was almost completely rebuilt during the Saâdien Dynasty who made their distinctive mark in its architecture and art. The Medersa centres around a large courtyard with a central pool for ablutions. The buildings are made of carved cedar wood, exquisite stuccowork, and colourful zellige tiles. At the back is a sizable prayer hall where the most elaborate decoration can be found. The interior is covered in an abundance of pine cone and palm motifs used around the mihrab to create a three-dimensional appearance. Throughout the Medersa are many Arabic inscriptions in stucco and zellige tile, the most common of which is the *bismillah* invocation: "In the name of Allah, the Compassionate, the Merciful." Above the central courtyard are the small windows of the tiny student dormitories; over 800 students were housed in this Medersa, difficult to imagine. From stairs in the entry vestibule you can explore all the rooms and enjoy a nice view over the courtyard. The rooms are arranged around smaller inner courtyards, rimmed with fine wood railings. We shall go on to see the

Almoravid Dynasty Koubba; also called **Koubba Ba'Adiyn**, the oldest building in Marrakech and the

only Almoravid building to remain standing in Morocco.

The Almoravids (1062-1145) were reformers and monastic-type warriors from the desert nomadic Sanhaja Berber tribe in what is now Mauritania. After conquering their homeland, they expanded to Morocco in 1062 and eventually extended their empire all the way to Algiers. Probably an ablutions annexe for the Ben Youssef Mosque, for centuries it was covered over amid the many rebuildings of the mosque; it was only excavated in 1952. This little building is significant not only because it's very old, but because its style is at the root of all Moroccan architecture. Its motifs of pine cones, palms and acanthus leaves were used in the Ben Youssef Mosque and other later buildings; its beautifully-shaped windows became the distinctive design of the Almohades and Merinids. Also highly influential on later designs are the

koubba's pyramid-like battlements, the rib design on the dome, and the sophisticated interior support system, composed of a square and star-shaped octagon. In addition to the koubba itself, visitors can view a large water cistern and remains of fountains for performing ablutions. We now proceed to the **Marrakech Museum of Art** and the **Bert Flint Museum** in the **Maison Tiskiwin**.

Displayed in a riad constructed at the turn of the 20<sup>th</sup> century in Hispano-Mauresque style, Bert Flint, a Dutch anthropologist and art historian, displays his excellent collection of costumes, jewellery, arms, basketwork, musical instruments, Moroccan art, popular traditions and artefacts, carpets and furniture collected over a period of 50 years as he travelled along the Gold Road from the Atlas Mountains to Timbuktu, crossing the regions of the Sahara and the Souss Valley. Flint was born in Groningen in Holland in 1931 and after studying Islamic and Hispanic art and culture moved to Marrakech in 1957 where he taught art while continuing to study Andalusian-Arab culture. Over the years his focus had increasingly turned to rural culture shown here in all its glory and variety. We continue on through the labyrinth of narrow alleyways making up the renowned cool, colourful and aromatic Souqs of Marrakech - the Dyers' Souq being the last to be visited - finishing up in the Djmaâ el Fnaâ Square and thence to your hotel. **L.**

**OUR PRICES WILL INCLUDE:** Private circle trip transportation in an air-conditioned from hotel to hotel. Private guided sightseeing excursion including one by calèche and all related entrance fees as listed in the itinerary. Light lunch. An English-speaking Licensed National Guide throughout.

**OUR PRICES WILL NOT INCLUDE:** *Accommodation pre & post, nor transfers from/to Marrakech's airport.* Gratuities to guide and chauffeur. Any expenditure of a personal nature. Bottled or gaseous water en-route, nor anything not specifically mentioned in the itinerary.

**To choose you hotel or ryad, please close this page and go to [Find a Hotel](#) or [Find a Ryad](#).**

**IT IS RECOMMENDED YOUR BRING WITH YOU:** Good trainers; pullover (seasonal); day pack; hygienic 'wipes;' camera and Ziploc bags for sensitive lenses; sunglasses, sunscreen.
